J.P. Morgan HireVue Interview Guide - Personalized for You

Congratulations on clearing the coding assessment for J.P. Morgan's Code for Good! This guide is tailored to help you excel in the HireVue virtual interview using your strengths: solving LeetCode problems, and working on impactful real-world projects like BusEase and Locomart.

1. Tell me about yourself

I'm a pre-final year Computer Science student who is passionate about solving real-world problems using technology. I've consistently practiced DSA and problem-solving on LeetCode, solving over 250+ problems, which has enhanced my coding skills and analytical thinking.

Alongside coding, I've worked on two major projects:

- BusEase: A smart platform that helps students track college bus schedules and raise real-time issues.
- Locomart: A MERN stack platform connecting local vendors with customers, supporting hyperlocal shopping.

These experiences helped me gain full-stack development skills, API integration, and practical problem-solving.

2. Project-Based Situational Questions

Q: Tell me about a time you had to work as a team to complete a project.

A: During the Locomart project, I collaborated with peers where I handled backend development with Node.js and MongoDB, while others worked on frontend and hosting. We coordinated via GitHub and daily standups. Despite college pressure, we built a working MVP and learned how to divide tasks efficiently.

Q: Describe a challenge you faced in a project and how you handled it.

A: In BusEase, we faced issues fetching accurate bus data due to improper backend logic. I

debugged the schema and rewrote queries to ensure correct data mapping. This fix resolved the problem and improved our app's reliability.

Q: Have you ever made a mistake in a project?

A: Yes, during the BusEase login module, I initially skipped proper password validation. Later I realized the risk and added strong validation rules with regex. This improved the security of the platform.

3. LeetCode & Problem Solving Strength

I've solved over 250+ problems on LeetCode and practiced problems across:

- Arrays and Strings

- Sliding Window

- HashMaps & Sets

- Recursion and DP

This consistent practice helped me crack the coding round of J.P. Morgan and improved my time-bound coding ability.

4. Final Tips for HireVue Interview

- Use the STAR method: Situation, Task, Action, Result.

- Speak clearly, confidently, and maintain eye contact with the camera.

- Practice in front of a mirror or record yourself.

- Keep answers within 1.5 to 2 minutes.

- Be ready to talk about any point mentioned in your resume.
